Array Networks Now Certified with RSA enVision to Provide Universal Secure Access with Comprehensive Monitoring for Industry and Regulatory Compliance

Interoperability enables joint customers to monitor and perform forensic analysis of logs to track user activity and detect anomalous behavior

MILPITAS, CA – June 7, 2011 – Array Networks Inc., (TWO: 3664) a global leader in application acceleration, secure access and cloud service delivery, today announced that it has achieved certification by the RSA Secured® Partner Program for interoperability between the Array SPX Series universal access controllers (UAC) and the RSA enVision® platform from RSA, The Security Division of EMC (NYSE: EMC). This certification signifies that a technical partnership has been established to increase security for joint customers.

Array Networks SPX Series UAC appliances were engineered from the ground up to provide high-performance secure access to cloud services, networks, applications and data for any class of user, on any device in any location. Using end-point and server-side security and encryption for data in motion, the SPX Series holds all users located inside or outside the corporate network to the same security standard. Whether at corporate headquarters, a branch office, home, a wireless hotspot or on-the-go, users can quickly and easily use PCs, laptops, smart phones and tablets to securely and easily access email, file shares and applications.

"Having previously received certification with the RSA SecurID® technology, we are proud to continue being a part of the partner program to achieve interoperability with RSA enVision as it is a natural fit with our SPX Series products," said Sunil Cherian, vice president of product marketing, Array Networks. "Array's solution provides identity-based access to applications, cloud services, data and resources and creates a record of all user activity. With RSA enVision integration and certification, businesses can now export Array logs for the purposes of demonstrable adherence to industry regulations and government compliance standards including PCI, HIPAA and Sarbanes Oxley."

"We are pleased to welcome Array Networks to the RSA Secured Partner Program. Customers today are seeking solutions for the challenges posed by various regulations. The integration between Array Networks SPX Series UAC appliance and RSA enVision is designed to benefit customers by enabling secure and compliant access to their resources," said Ted Kamionek, vice president, corporate development, RSA, The Security Division of EMC. "The integration helps customers to focus on their core business activities and monitor access to their infrastructure efficiently."

The RSA enVision platform is a scalable, high-availability solution for security information and event management. It is designed to provide automated collection, analysis, alerting, auditing, reporting and secure storage of all logs. The RSA enVision platform enables organizations to simplify compliance, enhance their security and risk mitigation and optimize IT and network operations.

About the RSA Secured Partner Program
The RSA Secured Partner Program is one of the largest and longest-running technology alliance programs of its type, bringing over 1,000 complementary solutions across more than 300 organizations together. RSA SecurID®, RSA® Access Manager, RSA® Adaptive Authentication, RSA® Digital Certificate

Solutions, RSA® Hybrid Authenticators, RSA® enVision, RSA® Federated Identity Manager and RSA® Key Manager Suite certification programs bring added assurance to customers that their solutions are certified as interoperable to help them achieve faster time to deployment and lower overall cost of ownership. The RSA Secured Partner Program reflects RSA's commitment to driving inventive collaboration across the industry and support standards-based interoperability with its information-centric security solutions to help protect information, identities and infrastructures.
