

FOR IMMEDIATE RELEASE

SyferLock Joins Array Networks' Technology Partner Program to Provide Software-Based Authentication for Array Networks' Application Delivery Networking Solutions

Shelton, CT & Milpitas, CA – October 7, 2014 - SyferLock Technology Corporation (www.SyferLock.com) today announced that it has joined the Array Networks (www.arraynetworks.com) Technology Partner Program and has proven interoperability of SyferLock's GridGuard™ two-factor and multi-factor authentication solutions with Array's application delivery networking solutions. SyferLock's software-based authentication solutions now provide enhanced access controls for Array solutions, without the need for hardware tokens and without any cell phone dependency like SMS-based solutions.

SyferLock's [GridGuard](#) software-based solutions deliver two-factor and multi-factor authentication utilizing patented software-based grids to convert static passwords/PINs into secure one-time passwords or PINs (OTPs). SyferLock's GridGuard authentication solution provides device-less OTPs, offering a simple, more secure way to access information while leveraging existing passwords and password infrastructure.

SyferLock's GridGuard is a perfect complement to Array's [AG Series](#) Secure Access Gateways, which provide secure remote and mobile access to applications and cloud services. Through interoperability with GridGuard, users of AG Series secure access solutions can gain an additional layer of access control, which is often mandated by regulations such as HIPAA and PCI, or desirable due to the confidential nature of materials accessed via the VPN.

"We are pleased that SyferLock's software-based authentication solutions have proven interoperable with Array Networks remote and mobile access solutions," stated Chris Cardell, CEO of SyferLock. "SyferLock's token-less one-time password solutions now provide users of Array Networks solutions with an innovative, cost-effective alternative for two-factor and multi-factor authentication. SyferLock's user-friendly authentication solutions are also easy to deploy with Array Networks solutions," added Cardell.

"Array Networks is committed to ensuring our leading application delivery networking solutions can easily integrate with a range of secure, cost-effective authentication options," said Rich Siegel, Vice President of Sales and Business Development for Array Networks. "Adding SyferLock to the Array Networks Technology Partner Program provides another choice for two-factor and multi-factor authentication that is ready to integrate with our remote, mobile and cloud access solutions."

For more information about high-performance secure access with multi-factor authentication, download the joint SyferLock and Array Networks [Solution Brief](#).

For more information about SyferLock's token-less OTP authentication solutions, which are available in both enterprise and cloud editions, or for information about becoming a SyferLock Sales Partner, contact sales@syferlock.com or +1 855.SyferLock.

About SyferLock Technology Corporation

SyferLock is a provider of next-generation token-less OTP authentication solutions. SyferLock offers an innovative software-based alternative to hard tokens, smart cards and other authentication solutions. SyferLock delivers two-factor and multi-factor authentication utilizing patented software-based grids to convert static passwords/PINs into device-less one-time passwords/PINs (OTPs). Increasingly, enterprises are turning to SyferLock and its superior software-based authentication solutions to strengthen security, eliminate hardware tokens and to reduce Total Cost of Ownership (TCO). SyferLock was named a 2013 Emerging Technology Vendor by CRN Magazine. For more information, visit <http://www.syferlock.com>.
