Array Networks Named Again as a Global Leader in Cloud Computing

For the second year in a row, Array is selected as the winner in Infrastructure-as-a-Service

Milpitas, CA – August 17, 2017 —The Business Intelligence Group today announced that it has awarded Array Networks Inc., the network functions platform company, a 2017 Stratus Award in their annual contest. The organization sought to identify the companies, products and people that are offering unique solutions that enable the adoption of cloud technologies.

Many CSP, MSP and IaaS data centers continue to grow – in both complexity and expectations – while networking and security professionals are looking for ways to gain agility through software-centric approaches. However, many organizations still rely on hardware to meet the requirements of business-critical operations and they are faced with a difficult decision of choosing agility or performance.

Array Networks provides an innovative approach to eliminate this agility vs. performance trade-off. Array's AVX Series Network Functions Platform combines the best attributes of dedicated hardware, virtualization and software-centric computing to create an environment that provides guaranteed performance for virtual networking and security functions. In other words, Array is enabling agility-at-scale.

"Congratulations to the entire Array Networks team for helping accelerate adoption of the cloud and for working to make all of our lives a little richer," said Russ Fordyce, Managing Director of the Business Intelligence Group. "The cloud is dominating the technology industry and we do not see any markers for that trend not continuing."

"We are honored to win the Infrastructure-as-a-Service category for second consecutive year," said Paul Andersen, Sr. Director of Marketing at Array Networks. "Our team has worked hard to develop a solution that addresses crucial pain points for the networking community, including MSPs, CSPs, IaaS providers, data center operators and more, and they deserve this recognition for their dedication."

About Array Networks
Array Networks, the network functions platform company, develops purpose-built systems for deploying virtual app delivery, networking and security functions with guaranteed performance. Headquartered in Silicon Valley, Array is poised to capitalize on explosive growth in the areas of virtualization, cloud and software-centric computing. Proven at over 5000 worldwide customer deployments, Array is recognized by leading analysts, enterprises, service providers and partners for next-generation technology that delivers agility at scale. About Business Intelligence Group
The Business Intelligence Group was founded with the mission of recognizing true talent and superior performance in the business world. Unlike other industry and business award programs, business executives—those with experience and knowledge—judge the programs. The organization's proprietary and unique scoring system selectively measures performance across multiple business domains and then rewards those companies whose achievements stand above those of their peers.
